

Zend Framework from the Command Line

(Zend Framework Party Tricks)

Three ways

- The Easy Way

Three ways

- The Easy Way
- The Hard Way

Three ways

- The Easy Way
- The Hard Way
- The Stupid Way

Three ways

curl, wget, etc.

- Handy tools

The Easy Way

curl, wget, etc.

- Handy tools
- Easy to “cron” a process

The Easy Way

curl, wget, etc.

- Handy tools
- Easy to “cron” a process
- Unnecessary overhead

The Easy Way

Zend Tool

- Good tool for what it does

The Hard Way

Zend Tool

- Good tool for what it does
- Easy to get started

The Hard Way

Zend Tool

- Good tool for what it does
- Easy to get started
- Difficult to extend

The Hard Way

Zend Tool

- Good tool for what it does
- Easy to get started
- Difficult to extend
- Not designed for the types of tasks we are trying to solve.

The Hard Way

- My Way

The Stupid Way

- My Way
- Real cli applications but written using Zend Framework and MVC (Well, M&C, there's not much V)

The Stupid Way

- No new skills to learn

Why My Way

- No new skills to learn
- All your favorite friends are there

Why My Way

- No new skills to learn
- All your favorite friends are there
- Easy to repurpose code

Why My Way

- From the Masterwork “Guide to Programming with Zend Framework”

Clearing the Cache

- From the Masterwork “Guide to Programming with Zend Framework”
- Using existing code and methods from the cli

Clearing the Cache

- From the Masterwork “Guide to Programming with Zend Framework”
- Using existing code and methods from the cli
- My first attempt at a cli using ZF.

Clearing the Cache

clearCache.php
Cal/Request/Cli.php
Cal/Router.php

Show Code Here

- Scratches an itch

makeDomain

- Scratches an itch
- Must be run as root because it restarts services

makeDomain

- Scratches an itch
- Must be run as root because it restarts services
- Very specific tool but solves a specific problem.

makeDomain

makeDomain.php
